Mining & Metals Supply Chain Solutions

Enabling Resilience and Efficiency in Mining Supply Chain

Scott Sheldon is your trusted partner in navigating the operational complexities of the mining and metals industry. From optimizing planning across remote operations to managing logistics constraints and responding to market volatility, we deliver tailored solutions that drive performance, transparency, and growth.

Challenges Mining & Metals Companies Face Today

Managing Supply Chain Volatility

Mining and metals operations are heavily impacted by fluctuating global demand, shifting commodity prices, and unpredictable supply conditions. Scenario-based planning, dynamic forecasting, and risk modeling tools help mitigate disruptions and improve responsiveness.

Coordinating Remote and Complex Operations

From mine to mill to market, coordinating logistics and inventory across isolated and often multi-site operations remains a major challenge. Integrating planning and execution systems improves synchronization, reduces working capital, and ensures continuous material flow.

Meeting ESG and Compliance Requirements

There is increasing pressure to improve sustainability, traceability, and regulatory compliance across the supply chain. Digital tools provide visibility into sourcing, environmental impact, and carbon tracking—empowering companies to meet ESG goals and stakeholder expectations.

Success Stories in Mining

Martin Marietta

Martin Marietta, a leading producer of aggregates and heavy building materials, partnered with Scott Sheldon to improve supply chain planning across its widespread operations. Facing challenges with demand variability, disconnected planning processes, and limited inventory visibility, the company needed a more agile approach. Scott Sheldon implemented an integrated planning framework that streamlined demand forecasting, improved inventory management, and enhanced cross-functional alignment. As a result, Martin Marietta achieved greater forecast accuracy, better inventory performance, and more responsive decision-making—building a foundation for long-term efficiency and resilience in a complex and capital-intensive environment.
